

Release Planning

Let's say you have designed a product.
How would you go and build it?

5 Points about Agile Development

We don't know everything... yet

Iteration over Specification

Potentially shippable releases

“Definition of Done”

Concise Feature Definitions (i.e. User Stories)

As a Group:

What's good and what's bad about Agile?

Release Planning

Easier to more accurately estimate development effort

Helps identify dependencies

Keeps priorities in check

A Few Techniques

Breadth First Functionality vs Depth First Functionality
By Functional Chunk
Screen by Screen Walkthrough
Based on a protocol (i.e. IMAP)

How does this relate to the concept of an MVP?

A Case Study.

How would you break this design down?

How Does Cholesterol Affect My Body?

High Cholesterol

When you have high cholesterol, you may develop fatty deposits in your blood vessels. Eventually, these deposits make it difficult for enough blood to flow through your arteries. Your heart may not get as much oxygen-rich blood as it needs, which increases the risk of a heart attack. Decreased blood flow to your brain can cause a stroke.

What is Cholesterol?

As a Group

How would you build a webmail app (i.e. Gmail).
Start out by listing out the functionality of your app.
Then organize the functionality into releases.

Some Big Questions

What drives the release cycle?

Are we making incremental releases to the users?

How do we prioritize what to build first?

How do you balance user facing functionality with infrastructure tasks?
